Cleaning, disinfection and sterilization instructions

Procedure “A”

Basic Principles:
• All products are supplied non-sterile and must be appropriately cleaned, disinfected, and sterilized before use.
• Ensure equipment used is serviced and checked regularly, and manufacturer’s use instructions are followed.
• Please heed regulations applicable to your country.
• Repeated reprocessing may affect the product. Decommissioning of the device is normally determined by wear and damage prior to use.
• Avoid contact of dissimilar metals at any point during the cleaning & sterilization process.
• Single-use only products cannot be reprocessed.

Point of Use:
• Products should be cleaned as soon as possible after use to prevent soils from hardening.

Cleaning:
• Remove all visible debris after use and prior to sterilization.
• Product can be manually cleaned with IMS® Daily Clean*, following manufacturer’s instructions.
• Use a nylon brush or similar soft brush.
• You may optionally pre-soak the contaminated rings with IMS® Daily Clean*, following the manufacturer’s instructions, for up to 6 minutes to aid in manual cleaning.
• Visually inspect product for damage (eg. rust and cracking). Remove from service if damage is present.
• If any visible debris remains, repeat process above as needed.
• Do not add oils or lubricants to instruments.
• See appendix for supplemental cleaning information.

Sterilization:
• Process product through steam autoclave and store only in CE/FDA approved sterilization pouch.
• Steam autoclave sterilization only. Perform one cycle at 270°F (132°C) and 30.46 psi (210kPa) for 6 minutes, following the autoclave manufacturer’s instructions, with a 20-30 minute drying time. Never exceed temperatures of 278.6°F (137°C).
• DO NOT use chemical sterilization techniques.

Storage:
• Store sterilized product in a dry and dust free location.
• Keep product sealed in the sterilization pouch until ready to use.

Procedure “B”

Basic Principles:
• All products are supplied non-sterile and must be appropriately cleaned, disinfected, and sterilized before use.
• Ensure equipment used is serviced and checked regularly, and manufacturer’s use instructions are followed.
• Please heed regulations applicable to your country.
• Repeated reprocessing may affect the product. Decommissioning of the device is normally determined by wear and damage prior to use.
• Avoid contact of dissimilar metals at any point during the cleaning & sterilization process.
• Single-use only products cannot be reprocessed.

Point of Use:
• Products should be cleaned as soon as possible after use to prevent soils from hardening.

Cleaning:
- Remove all visible debris after use and prior to sterilization.
- Product can be manually cleaned with IMS® Daily Clean*, following manufacturer’s instructions.
- Use a nylon brush or similar soft brush.
  - For 3D500, 3D600, & 3DXR: Take care not to damage the Soft-Face during cleaning.
- You may optionally pre-soak the contaminated rings with IMS® Daily Clean*, following the manufacturer’s instructions, for up to 6 minutes to aid in manual cleaning.
- DO NOT expose product to solutions containing chemicals such as alcohol, acetone, ketone, or other harsh chemical disinfectants.
- Visually inspect product for damage (eg. rust and cracking). Remove from service if damage is present.
- If any visible debris remains, repeat process above as needed.
- See appendix for supplemental cleaning information.

Sterilization:
- Process product through steam autoclave and store only in CE/FDA approved sterilization pouch.
- Steam autoclave sterilization only. Perform one cycle at 270°F (132°C) and 30.46 psi (210kPa) for 6 minutes, following the autoclave manufacturer’s instructions, with a 20-30 minute drying time. Never exceed temperatures of 278.6°F (137°C).
- DO NOT use chemical sterilization techniques.

Storage:
- Store sterilized product in a dry and dust free location.
- Keep product sealed in the sterilization pouch until ready to use.

Procedure “C”

Basic Principles:
- All products are supplied non-sterile and must be appropriately sterilized before use.
- Ensure equipment used is serviced and checked regularly, and manufacturer’s use instructions are followed.
- Please heed regulations applicable to your country.
- Products are single use only and cannot be reprocessed.
- Avoid contact of dissimilar metals at any point during the sterilization process.

Sterilization:
- Process product through steam autoclave and store only in CE/FDA approved sterilization pouch.
- Steam autoclave sterilization only. Perform one cycle at 270°F (132°C) and 30.46 psi (210kPa) for 6 minutes, following the autoclave manufacturer’s instructions, with a 20-30 minute drying time. Never exceed temperatures of 278.6°F (137°C).
- DO NOT use chemical sterilization techniques.

Storage:
- Store sterilized product in a dry and dust free location.
- Keep product sealed in the sterilization pouch until ready to use.
Cleaning, disinfection and sterilization instructions

Procedure “D”

Basic Principles:
- All products are supplied non-sterile and must be appropriately sterilized before use.
- Ensure equipment used is serviced and checked regularly, and manufacturer’s use instructions are followed.
- Please heed regulations applicable to your country.
- Products are single use only and cannot be reprocessed.

Sterilization:
- Process product through steam autoclave and store only in CE/FDA approved sterilization pouch.
- Steam autoclave sterilization only. Perform one cycle at 270°F (132°C) and 30.46 psi (210kPa) for 3 minutes, following the autoclave manufacturer’s instructions, with a 20-30 minute drying time. Never exceed temperatures of 278.6°F (137°C).
- DO NOT use chemical sterilization techniques.

Storage:
- Store sterilized product in a dry and dust free location.
- Keep product sealed in the sterilization pouch until ready to use.

Procedure “E”

Basic Principles:
- All products are supplied non-sterile and must be appropriately disinfected before use.
- Please heed regulations applicable to your country.
- Products are single use only and cannot be reprocessed.

Cleaning/Disinfection:
- Hand wash in lukewarm (30-35°C) tap water using a mild detergent.
- Allow to dry completely before storage or use.
- DO NOT use chemical disinfecting techniques.

Storage:
- Store product in a dry and dust free location.
- Keep product sealed until ready to use.
Procedure “F”

Cleaning:
- Instrument must be in open position
- Remove visible debris or organic matter from the instrument and surface with a disposable wipe or surface brush. This is to be done by scrubbing with warm tap water and soap or detergent.
- Inspect instrument for debris. Repeat cleaning step 2 if there are debris left.
- All external surfaces must be wiped with a lint-free cloth or sprayed with a suitable disinfectant.
- Rinse external surfaces with warm tap water.
- Dry instrument.

Sterilization:
- Sterilize in a steam autoclave using distilled water at a temperature of 134°C (273°F) for 3 min.
- Sterilization is NOT a substitute for proper cleaning. Clean the instrument first then sterilize it.
- Do not immerse the instrument in liquid or place it in an ultrasonic cleaning unit.

Storage:
- Store sterilized product in a dry and dust free location.
- Keep product sealed in the sterilization pouch until ready to use.
